INTERNATIONAL CONFERENCE ON
FAST SEA TECHNOLOGY

WEDNESDAY, OCTOBER 29
NORFOLK, VIRGINIA

SPONSORSHIP OPPORTUNITIES

ESNA BATTERY ELECTRIC SES.
IMAGE COURTESY OF ESNA AS.

The SNAME Technical and Research Program will host the 2025 International Conference of Fast Sea Technology (FAST '25) on Wednesday, October 29, just before the start of SMC 2025 in Norfolk, Virginia.

ALL SPONSORSHIPS INCLUDE:

- ✓ Recognition on the SMC 2025 website and mobile app
- ✓ Logo placement on slides and signage throughout the FAST Conference

The FAST conference dates back to 1991, when two astute professors from Norway recognized the needs to bring international minds together to foster the sharing of information associated with large high speed craft. The impetus for this recognized need was the introduction of the large, high speed ferry industry, and over the years its papers have covered a wide range of relevant topics on all types of high performance vessels. The conference always attracted a large delegation of design and research professionals from across the maritime community. The last FAST Conference was held in 2021 in conjunction with the SNAME Maritime Convention in Providence, Rhode Island. FAST is back in 2025 and will be held in conjunction with the SNAME Maritime Convention; this year in Norfolk, VA. Hampton Roads is home to the U.S. Navy Combatant Craft Center, designers of high speed craft, and a vibrant power boating community. FAST will be an opportunity for designers and researchers to explore and discuss the latest developments in the high performance craft segment of our industry. The technical program is intended to attract representatives from all the different disciplines associated with high speed craft design, with a focus on advanced digital design processes and techniques.

Gain recognition and exposure with sponsorship opportunities to reach this influential audience:
